Design Principles with Excel®
Techniques and Applications

Overview

Chapter 4: Startup

A screenshot of a spreadsheet application showing a startup schedule. The main area contains a grid of dates from 2002 to 2003, with various colored cells representing different tasks or events. A sidebar on the right shows a list of tasks with checkboxes and descriptions.

Chapter 5: Keyboard Trainer

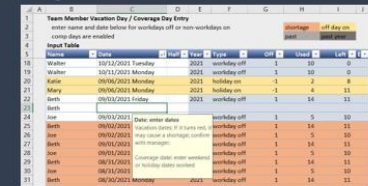

A screenshot of a keyboard trainer application. It features a large keyboard layout with keys highlighted in yellow. Below the keyboard, there is a list of tasks or exercises, each with a checkbox and a description. The interface is clean and focused on the keyboard layout.

Chapter 6: Gantt Chart

Chapter 7: Team Calendar

A screenshot of a team calendar application. It shows a grid of dates with colored cells indicating vacation days or coverage for team members. A sidebar on the right lists team members and their vacation days, with columns for name, date, type, and status.

Chapter 8: Project Tracker

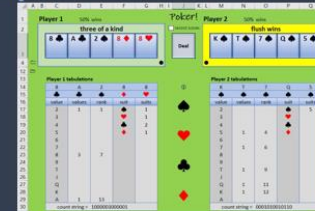

A screenshot of a project tracker application. It displays a list of tasks with columns for name, status, and dates. The tasks are organized into a table with checkboxes and progress indicators. The interface is designed for easy tracking of project milestones.

Chapter 9: MRP Demo

Chapter 10: Fun and Games

A screenshot of a fun and games application. It shows a card game interface with two players, Player 1 and Player 2. The interface includes a deck of cards, a hand of cards, and a table for the game. The cards are displayed with their suits and values, and the game progress is shown in a clear and engaging way.

Startup

ABOUT STARTUP

A personal Startup file is a place to keep all your favorite tools hidden but accessible. This one has several reference sheets, samples and general macros useful in project development.

Calendar: perpetual calendar with different highlights for holidays, special dates, date ranges and annual events. Includes holiday calculation and monthly workday report.

Controls: compares Form and ActiveX controls with samples and tips.

Symbols: lists ASCII characters in Symbol fonts, sample Unicode symbols, and suggested AutoCorrect symbols.

Themes: lists the 34 Themes with Font and Color for reference.

Colors: presents colors several different ways with sample macros to read and set colors. Includes VBA navigation between column groups like sheets-within-a-sheet.

Functions: tabulates results of selected single and dual-operand functions.

Combinations: lists members of all four combination variants by selecting up to 4 of up to 9 digits

Outline: builds and formats an outline, with slicer selection.

Macros: ListNames (see result on Names sheet, can also upload Name comments), ListFormatConditions (only works with formula conditions; see result on FormatConditions sheet), ClearPageBreaks (assigned to Shift+Ctrl+P), RecordColors (records decimal and RGB values for a column of colored cells)

Excel features: Advanced formulas; Name Manager named ranges and formulas; Data Validation rules and messages; Conditional Formatting; Tables linked for input, process and output; Column Groups; Controls; Symbols; Themes; Colors; Functions; Slicers **VBA:** Colors Sheet Module, navigation and formatting; Functions Sheet Module, formatting; General Module, general use macros.

Startup

USAGE NOTES

This file is provided as a normal Excel Macro-Enabled Workbook, Startup.xlsm. The intent of a startup file is twofold. First, it is to reside in the folder below, from which files are opened automatically when Excel starts:

C:\Users\ (username) \AppData\Roaming\Microsoft\Excel\XLSTART (or similar)

Second, the startup file is meant to be hidden normally (Alt-W,H), and only unhidden as needed (Alt-W,U).

You can hide this file and save it in your XLSTART as above, or you can have Excel create a startup for you, and build as you go. Excel provides a default startup file called PERSONAL.xlsb, which will be created in the XLSTART folder for you, with view hidden, in the following condition:

1. you record a macro
2. you select "Personal Macro Workbook" in the "Store macro in:" box.
3. the next time you shut down Excel, you click "Save" when prompted.

The main purpose is to make it possible to run public macros in other files without the need to copy or import the module. For that purpose you never need to unhide the file. It is always visible in VBA (Alt+F11) and can be edited and saved there.

The second purpose is that since it is always open, it is a convenient place to store notes, cheat sheets, reference information or anything you want to keep accessible. For this purpose, add as many sheets as you want, and either unhide it when needed, or leave it unhidden if it doesn't bother you.

Note: there's nothing special about PERSONAL.xlsb, it's just a shortcut to creating the startup file. The .xlsb format bypasses macro security but behaves like a normal spreadsheet. Thus, you can start with that and add to it as you go, or you can save this one as described above.

Symbol Fonts

ASCII characters in standard font and five symbol fonts

Enter the character from keyboard (Body column, 32-126), or press Alt while typing the 4-digit code on the number pad (127-255), or use =CHAR(Code). Set the font of the cell or character. To display certain symbols without changing font, try Unicode.

	Code	Entry	Body	Symbol	Webdings	Wingdings	Wingdings 2	Wingdings 3

		ColorIndex		(none)		=IFNA(MATCH(ColorNum,ColorIndex[decimal],0),"(none)")			
21		The hex color is expressed as six digits where each 2-digit pair ranges from 00 to FF, read left to right as #RRGGBB, total from #000000 (black) to #FFFFFF (white). Conversely, the decimal color value reverses the significance of the colors, as shown in the formulas:							
22		Hex				=Red*16 ⁴ + Green*16 ² + Blue			
23		Decimal				=Blue*16 ⁴ + Green*16 ² + Red			
24									
25									
26									
27									

Use scroll bars or set RGB cells to activate this code:

```
Sub SetColorCustom()
Dim DecVal As Long, HexVal As String
On Error Resume Next
With ActiveSheet
DecVal = RGB([Red], [Green], [Blue])
HexVal = _
Right("0" & Hex([Red]), 2) & _
Right("0" & Hex([Green]), 2) & _
Right("0" & Hex([Blue]), 2)
.[ColorRange].Interior.Color = DecVal
.[ColorNum] = DecVal
.[ColorHex] = HexVal
End With
End Sub
```

Select Standard or Constant cells to activate this code:

```
Private Sub Worksheet_Change(ByVal Target As Range)
With ActiveSheet
If Target.Address = [customconstantpick].Address Or _
Target.Address = [customstandardpick].Address Then
.Scenarios(Target.Value).Show
.[ColorRange].Interior.Color = [ColorNum]
End If
End With
End Sub
```

Controls and inputs enable self-learning

Colors Random

The screenshot shows an Excel spreadsheet with a sidebar on the left containing a list of options: Select:, Overview, Dialog, Theme, Standard, Custom, **Random**, Index, All, and Randomize Colors. The main area displays a 20x20 grid of random colors. To the right of the grid is a VBA code block. A blue speech bubble points to the 'Randomize Colors' option in the sidebar.

Random Color Grid

```
Public Sub SetColorRandom()  
Dim c As Range, r, g, b As Integer  
For Each c In [ColorRandomGrid]  
With WorksheetFunction  
r = .RandBetween(0, 255)  
g = .RandBetween(0, 255)  
b = .RandBetween(0, 255)  
End With  
c.Interior.Color = RGB(r, g, b)  
Next  
End Sub
```

Randomizer demonstrates color range

Keyboard Trainer

ABOUT KEYBOARD TRAINER

Becoming a keyboard expert requires first knowing what shortcuts can do, which usually means searching and reading long lists with many key combinations. Then, most people can only memorize a few at a time; many will never know what they're missing, leaving keyboard productivity as an underused opportunity.

Keyboard Trainer is an on-screen keyboard simulation flanked by Slicer banks of functions and keys. As Slicer buttons are clicked, the keyboard lights up to assist memorization. Slicers are by function group, function and key and include 193 shortcuts.

A second sheet is focused on Ribbon KeyTips. This sheet simulates the Ribbon tabs and groups with horizontal Slicers, and the KeyTip "spelling" with vertical, single-character Slicers.

Excel features: Advanced Formatting; Conditional Formatting; Name Manager named ranges and formulas; Column Groups; Tables; PivotTables; Slicers **VBA:** none

© 2021 Doug Bates

Keyboard Trainer

USAGE NOTES

The keyboard simulator is most effective with maximum screen space. Headings are hidden (Alt-W,V,H).

Additional space can be gained by:

- Ctrl+F1 to hide the ribbon

- Shift+Ctrl+F1 to hide the ribbon, toolbar and status bar

Slicer navigation by keyboard:

1. Ctrl+Alt+5 to select the first Slicer. The Slicer bank will have an extra border indicating it is selected.
2. Tab twice to place the focus on the buttons.
3. Arrow around, Space or Enter to select a button.

When using multiple Slicers together such as Area→ Function or Area→ Key or Function→ Way, reset the lower Slicer by clicking the "Clear Filter" button before selecting another item in the higher Slicer. If the Slicer is selected (has extra border), "Clear Filter" can be done by Alt+C.

To view the pivot or table:

1. Click the Show Help checkbox
2. Select the heading P or T
3. Follow the tips to unprotect the sheet and open the group

Keyboard Pivot

The screenshot displays a software interface with three main components:

- Keyboard Layout:** A virtual keyboard is shown. The '+' and '=' keys are highlighted in yellow. The 'enter' key is highlighted in green.
- Filter by Key:** A window titled 'filter by key' shows a grid of keys. The '+' and '=' keys are highlighted in blue.
- Pivot Table:** A pivot table titled 'Function' is shown. It has columns for 'Way', 'Mod', 'Mod', 'Key', 'Num', and 'Area'. The table lists three functions: 'enter: autosum', 'insert: column, row or dialog', and 'navigation: zoom in'. The '+' and '=' keys are highlighted in the 'Key' column for each function.

Function	Way	Mod	Mod	Key	Num	Area
enter: autosum	1	Alt	(blank)	+ =	(blank)	edit
insert: column, row or dialog	1	Ctrl	Shift	+ =	(blank)	edit
navigation: zoom in	1	Ctrl	Alt	+ =	(blank)	navigation

Hidden dynamic pivot reacts to slicers to filter and select keys for highlighting

Chapter 6: Gantt Chart

Gantt Chart

ABOUT GANTT CHART

A Gantt chart is a common project management tool for linking and scheduling interdependent activities. Informal Gantts often lack key features.

Capacity is a critical constraint on the project schedule. When a project spans peak holiday or vacation periods, the manager might mentally adjust due dates, or even overlook the constraint. Here the manager can reflect the constraint with custom weekends, holidays and special down days, or define a part-time project with custom workdays.

The horizontal time scale has four options for different audiences; calendar days, workdays, weeks and months. Constraint periods are shaded. Activities appear as colored bars. There are no activity relationships, but there can be up to seven sequential stages or discrete events on a single row.

Excel features: Advanced Boolean, Date and Lookup formulas; Name Manager named ranges and formulas; Data Validation rules and messages; Conditional Formatting; Tables linked for input, process and output; Controls; **VBA:** none

© 2021 Doug Bates
info@xlegant.com

Gantt Chart

USAGE NOTES

Configure:

Plan sheet, Stages legend (8 colored cells): up to 4 characters acronym to identify stages

Plan sheet, Capacity thresholds (6 colored cells): enter days to shade as reduced capacity

Calendar sheet: configure work week, holidays, other dates, set count boxes to count as downtime

Setup: Fill white cells in header, and white columns:

Fill columns per guidance message in column heading

Event type is continuous (duration=stage length) or discrete (separated by stage length)

Duration type is workdays or calendar days

Stages S2-S7 are optional: use as sequential stages, discrete instances, or to change task color

Monitor and maintain:

Show all days: while Day bucket is displayed, shows all calendar days with down days shaded

Use all days: shows schedule with no downtime (earliest completion scenario)

Date bucket: select Month, Week or Day to expand or collapse horizon

Status (explicit): set hold to pause or closed on task completion

Status (implicit): current tasks start in past and end in future; overdue tasks end in past

Select pencil icon (cell F1) to expand or collapse column group for space

Gantt Chart

TEMPLATE NOTES

Gantt Chart is most useful as a template. This allows you to save a blank version of the file which remains intact as you use it to create new files. Thus, you don't need to retrieve your last file and remove all the data to start a new one, just open the template and it will save as a workbook.

Gantt Chart is provided as both Excel Template (Gantt Chart.xltx) and Excel Workbook (Gantt Chart.xlsx). This is so that you can see a filled example to learn how it works, and have the template for your own use. To use the template, first make it accessible.

Option 1: save the template file in your template folder, which you can find in Options, Alt-F,T,S, something like C:\Users\ (username) \OneDrive\Documents\Office\Templates.

Option 2: open the template, you'll see "Gantt Chart1" as the filename. Hit F12 (Save-As), remove the "1" in the name, and in "Save as type:", select Excel Template. This selects your template folder automatically. To use the template, File-New and navigate to personal templates, Alt-F,N,Y,3, it should be there. You can pin it to the top to make it easier to find next time.

To change the template, follow Option 2 above; open, edit, then Save-As and overwrite the current one. For example, you might want to save it with some data that is standard or similar across projects.

Date: enter dates
 Vacation dates: If it turns red, it may cause a shortage; confirm with manager.
 Coverage date: enter weekend or holiday dates worked

Team Calendar

ABOUT TEAM CALENDAR

In a business environment, team members and managers need to record and track days off, special staffing requirements, and risks such as understaffing and end-of-year vacations.

Team Calendar takes members' entry of name and date, normally a day off but may also be used to record a day worked on a weekend or holiday. A policy setting can then return a comp day, or not. A day off that will result in a shortage is flagged, to be confirmed with the manager. Each entry updates the individual's days used and remaining for the current year.

The manager maintains the policy and the team roster with hire date, which determines days due. They can then maintain special peak dates, shutdowns, or weekend and holiday coverage needed. A calendar is included that highlights all date entries, and even birthdays and milestone anniversaries.

Excel features: Advanced Boolean, Date and Lookup formulas; Name Manager named ranges and formulas; Data Validation rules and messages; Conditional Formatting; Tables linked for input, process and output; PivotTables and PivotCharts; Column Groups; Camera tool; **VBA:** none

© 2021 Doug Bates

info@xlegant.com

Team Calendar

USAGE NOTES

Input: name and date; name must exist in Team table on Settings sheet. Input response:

shortage is highlighted red when a workday off is entered which will cause a staff shortage

coverage day is highlighted yellow when a non-workday is entered

vacation days used and left are updated including comp days if enabled

calendar: set or clear checkboxes to customize display (calendar is linked image of Report calendar)

Report: review Report table, input Special table

Start: select Today (default), or Jan 1 of this year or Jan 1 of next year

Report Flag column: review short and over flags

Report Used column: review aggregate vacation risk based on Alert start and level in Settings

Special table: enter date and \pm staff required or 0 for shutdown

Calendar: set or clear checkboxes to customize display

Analysis: review vacation usage by team member and overall. Pivots refresh upon opening.

Settings: select icons in row 1 to expand/collapse column groups

Date settings: format, work week and holiday rules and/or manual holiday dates

Team settings: controls, vacation policy (include milestone years), team member list

Maintenance:

Input table: keep dates in past until new year starts and all carry-overs have been recorded

Special table: dates in past can be deleted

Team table: enter new hire placeholder for vacation planning purposes, maintain dates

Team Calendar

TEMPLATE NOTES

Team Calendar can be used as a template to set up multiple teams, or once for a single team. There is no need to create a new file for each year. Once a team is set up, the file can be maintained as an ongoing Calendar from year to year. Past years can be deleted or kept, the input and analysis is always for the current year.

To use the template as a single file, follow Option 2 below, except Save-As Excel Workbook instead of Excel Template. To use the template as a template, first make it accessible.

Option 1: save the template file in your template folder, which you can find in Options, Alt-F,T,S, something like C:\Users\ (username) \OneDrive\Documents\Office\Templates.

Option 2: open the template, you'll see "Team Calendar1" as the filename. Hit F12 (Save-As), remove the "1" in the name, and in "Save as type:", select Excel Template. This selects your template folder automatically.

To apply the template, File-New and navigate to personal templates, Alt-F,N,Y,3, it should be there. You can pin it to the top to make it easier to find next time.

To change the template, follow Option 2 above; open, edit, then Save-As and overwrite the current one. For example, you might want to save it with some data that is standard or similar across teams.

Project Tracker

ABOUT PROJECT TRACKER

Managers of long projects with regular status meetings often use Excel to take notes, only to find that it becomes more and more unmanageable with each meeting. With many weekly updates on each of many items, it's a three-dimensional problem stuck in a two-dimensional sheet. Actions, owners and dates get lost in the text as updates accumulate in a single cell per item.

Project Tracker keeps Items and Notes in two similar Tables that are linked and stacked vertically in a split screen. Double-click events are used to select the related records, insert new records, and set status indicators. Right-click events set urgency and sort the tables. "Faux control" symbols and Conditional Formatting reflect status conditions including overdue, escalation, and closure, and show what remains to be updated.

Calendar is included for reference, as a manual lookup for setting due dates considering holidays and other downtime.

Excel features: stacked and linked Tables; Split Window; "Faux Control" Symbols; Conditional Formatting; Row Group; Data Validation rules and messages; **VBA:** Worksheet event triggers; automated Window Split, Table Sort, Table Add rows, Conditional Formatting and more; contextual logic to perform different actions based on Target cell address.

Project Tracker

USAGE NOTES

Settings: Enter project title; double-click vertical double arrow to open the header row group to enter more project information, to view color and symbol legends, and to set date format and duration basis.

Items

Insert: double-click in Text column to insert new Item with next number; enter Text and Name

Select: double-click in Select column to select Item and related Notes

Delete: Ctrl- to delete table row; orphan Notes are flagged

Notes

Insert: double-click Items[Item] to create new Note with Name and today's date

Status: right-click Status to cycle Lo-Hi-None level; double-click Status to close or reopen Note

Delete: Ctrl- to delete table row

Monitor and maintain:

Insert new Note as above; this selects all Notes attached to the Item

While Item is selected, review and update Status and End of existing Notes

Set Status as above to escalate or close a Note

Right-click a column header to sort the table

Project Tracker

TEMPLATE NOTES

Project Tracker is most useful as a template. This allows you to save a blank version of the file which remains intact as you use it to create new files. Thus, you don't need to retrieve your last file and remove all the data to start a new one, just open the template and it will save as a workbook.

Project Tracker is provided as both Excel Macro-Enabled Template (Project Tracker.xltm) and Excel Macro-Enabled Workbook (Project Tracker.xlsm). This is so that you can see a filled example to learn how it works, and have the template for your own use. To use the template, first make it accessible.

Option 1: save the template file in your template folder, which you can find in Options, Alt-F,T,S, something like C:\Users\ (username) \OneDrive\Documents\Office\Templates.

Option 2: open the template, you'll see "Project Tracker1" as the filename. Hit F12 (Save-As), remove the "1" in the name, and in "Save as type:", select Excel Macro-Enabled Template. This selects your template folder automatically.

To use the template, File-New and navigate to personal templates, Alt-F,N,Y,3, it should be there. You can pin it to the top to make it easier to find next time.

To change the template, follow Option 2 above; open, edit, then Save-As and overwrite the current one. For example, you might want to save it with some data that is standard or similar across projects.

MRP Demo

ABOUT MRP DEMO

MRP, or Material Requirements Planning, is in essence a simple ledger of future inventory debits and credits. However, due to a variety of dynamic variables, results can be difficult to predict and visualize. This sheet gives the common tabular display of the future plan, and a chart of demand, supply and inventory.

The Demo is an instructional tool using VBA-controlled Scenarios to present sets of inputs and their effect on output. Several illustrative Scenarios are preset and can be scrolled. The user can enter their own values, and can save, change or delete Scenarios.

Variables include demand randomized within a high/low range, or constant; beginning inventory, minimum and incremental order quantities, and cycle time; safety stock and safety time, both static and time-phased.

This project uses complex formulas made readable with line breaks, indents and help text.

Excel features: Advanced formulas with Name references; Conditional Formatting; Table; Chart; clean screen;

VBA: Formatting, Scenario Management

© 2021 Doug Bates

info@xlegant.com

MRP Demo

USAGE NOTES

The demo is most effective with maximum screen space. Headings are hidden (Alt-W,V,H). Additional space can be gained by:

Ctrl+F1 to hide the ribbon

Shift+Ctrl+F1 to hide the ribbon, toolbar and status bar

The five grouped buttons in each section are used to select, add, change and delete scenarios, with prompts to guide the user.

- < and > spinbuttons cycle through existing scenarios
- + button creates a new scenario with the current values in the section
- Δ button changes the values and/or description of the current scenario
- X button deletes the current scenario and renumbers any scenarios above it

All white cells are editable for ad-hoc demo or to set up new scenarios. Scenarios can also be manually managed via Scenario Manager, Alt-A,W,S.

Table formulas can be read by expanding the formula bar, Shift+Ctrl+U.

A hidden sheet stores values generated by VBA macros.

Input

Material Requirements Planning Demo						40 days	
5 of 5		Demand and Supply			5 of 5		
large demand range				7 day cycle			
Demand Settings	Random Demand	<input checked="" type="checkbox"/> Random	Beginning Stock...	350			Supply Settings
	Low Demand...	45	Cycle Period...	7 day			
	High Demand...	200	Minimum Quantity...	500			
	Default Demand...	200	Incremental Quantity...	250			
4 of 4		Safety			3 of 4		
static and future safety stock				future safety time			
Safety Stock Settings	Static	Initial	300	Static	Initial	0 days	Safety Time Settings
	Future Safety Stock	Day 3	50	Future Safety Time	Day 3	3 days	
		Day 7	150		Day 7	4 days	
		Day 11	400		Day 11	5 days	
		Day 15	200		Day 15	6 days	
		Day 19	300		Day 19		

Four input areas each have preset scenarios and scenario controls

All white cells can be edited

Current scenario number and description are displayed

Controls allow user to select, create, change and delete scenarios

Table

Formulas are written with structured references on multiple lines and with self-contained notes

Chart

Chart type and styles show effect of inputs

Scenarios

The screenshot displays the SAP Material Requirements Planning (MRP) interface. The main window is titled "Material Requirements Planning Demo" and shows a scenario named "large demand range" with a 7-day cycle. The "Demand Settings" section includes a "Random Demand" checkbox (checked) and values for Low Demand (45), High Demand (200), and Default Demand (200). The "Supply Settings" section includes Beginning Stock (350), Cycle Period (7 day), Minimum Quantity (500), and Incremental Quantity (250). A "Safety Stock Settings" section is also visible, showing static and future safety stock values.

A "Delete Scenario" dialog box is open, asking for confirmation to delete scenario "SUPPLY 5?". The dialog includes a question mark icon and "OK" and "Cancel" buttons. A yellow arrow points from the "Delete Scenario" button in the scenario settings to the dialog box.

Scenario controls state the action and require confirmation

Fun and Games

ABOUT FUN AND GAMES

Games are great for demonstrating interactive and random number techniques. Fun features encourage repetition, which accelerates learning. This file has four sheets for single player practice, including two games with simulated competition.

Poker: cards are dealt to two players, with click to hold for up to three deals before the winner is revealed. Counting and scoring processes are displayed. Uses symbols and array functions.

Dice: two pairs of dice are rolled and the result scored. A game can be up to 100 rolls. Dice are designed in a symbol font with various dot options, using array constants to put the dots on the face.

Snake: uses four directional arrows to trace the cursor around a play zone, demonstrating how selection works. Uses the Worksheet_SelectionChange event. Pick one of two simple games, or just practice.

Palindrome: fun word-play; enter a phrase and it is separated by letter and reflected to see if a palindrome can be made. Adjust spacing and punctuation, and record results. Uses array and text functions.

Excel features: Advanced formulas; Logical, Text, Array Functions; Name Manager named ranges and formulas; Conditional Formatting; Data Validation rules and messages; Table processing; Controls; **VBA:** each sheet contains its own macros for game play, selection and navigation.

Fun and Games

USAGE NOTES

Poker

Play: click Deal button; click cards to hold. Hold at least one card to replace others

Settings: click icons to navigate or hide elements; click deck image to view deck

Record: click checkbox to record hand results, click hash mark icon to view or delete history

Dice

Play: click the 3D die to roll

Settings: select Pip; enter doubles multiplier; enter rolls per game; click folder for more info

Snake

Play: practice with arrows or mouse in play zone; click a game icon to turn game on/off

Snake: select as many cells as you can one at a time before hitting a filled one

Balance: arrow or mouse to fill the zone and balance the four symbols

Settings: click trash can to clear zone; click switch to disable tracking; change tracking symbols

Palindrome

Start: click clear buttons to clear input areas; click demo buttons for example

Input: enter first half of palindrome; select pivot point 0 or 1

Edit: enter spacing adjustments, punctuation and capitalization as instructed

Record: click button to record palindrome or to review saved palindromes

Demo: enter seconds per step to view automated demos

Poker Play

Player 1 50% wins click cards to hold **Poker!** Player 2 50% wins click cards to hold
